Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I in Paper No. 7 is acknowledged.
2. Claims 34 - 88 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 7.

Claim Objections

3. Claims 7 - 33 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
5. Claims 1 - 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. With regard to claim 1, the phrase "of hard tissue, in particular carious dental tissue" renders the scope of the claim unclear, as it is unclear whether Applicant intends the claim to be limited to the larger scope of 'hard tissue' or the narrower scope of 'carious dental tissue'. With regard to claim 2, use of the phrase "preferably" renders the scope of the claimed subject matter unclear. With regard to claim 4, the final phrase of the claim, "to which ... is assigned" is unclear; the language

does not make clear the relationship between the elements. With regard to claim 5, the phrase "the output signal" lacks antecedent basis; the phrase "the output signals" is inconsistent with its antecedent; the description of the final five lines of the claim is unclear.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 1 - 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Omata. Omata teaches a hardness measurement apparatus with a rod-like, axially oscillating, measurement element (Figure 1; Embodiment 1).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art teaches a variety of other dental tissue measurement systems. Heckenberger teaches a fluorescence measurement of caries, plaque, and bacterial infection. Jung et al. teach optical measurement of the color of teeth. Mullane, Jr. teaches optical measurement of anomalous subsurface structures. Alfano teaches optical measurement of caries. Several references (Maxwell et al., Schmitt et al., Schnettler et al.) use principles of pulse oximetry to measure tooth

viability. Elbaum et al. teach imaging teeth by transillumination. Case et al. and Beckman et al. teach mechanical measurement of contour. Nuwayser teach identification of caries by measuring electrical conductivity. Settler teaches pH measurement.

9. Claim 6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
